*Annual Review of Physiology*
*Volume 68, 2006*

# CONTENTS

Frontispiece—*Watt W. Webb* xiv

**PERSPECTIVES,** *David L. Garbers, Editor*

Commentary on the Pleasures of Solving Impossible Problems of Experimental Physiology, *Watt W. Webb* 1

**CARDIOVASCULAR PHYSIOLOGY,** *Jeffrey Robbins, Section Editor*

Cardiac Regeneration: Repopulating the Heart, *Michael Rubart and Loren J. Field* 29

Endothelial-Cardiomyocyte Interactions in Cardiac Development and Repair, *Patrick C.H. Hsieh, Michael E. Davis, Laura K. Lisowski, and Richard T. Lee* 51

Protecting the Pump: Controlling Myocardial Inflammatory Responses, *Viviany R. Taqueti, Richard N. Mitchell, and Andrew H. Lichtman* 67

Transcription Factors and Congenital Heart Defects, *Krista L. Clark, Katherine E. Yutzey, and D. Woodrow Benson* 97

**CELL PHYSIOLOGY,** *David L. Garbers, Section Editor*

From Mice to Men: Insights into the Insulin Resistance Syndromes, *Sudha B. Biddinger and C. Ronald Kahn* 123

LXRs and FXR: The Yin and Yang of Cholesterol and Fat Metabolism, *Nada Y. Kalaany and David J. Mangelsdorf* 159

**ECOLOGICAL, EVOLUTIONARY, AND COMPARATIVE PHYSIOLOGY,** *Martin E. Feder, Section Editor*

Design and Function of Superfast Muscles: New Insights into the Physiology of Skeletal Muscle, *Lawrence C. Rome* 193

The Comparative Physiology of Food Deprivation: From Feast to Famine, *Tobias Wang, Carrie C.Y. Hung, and David J. Randall* 223

Oxidative Stress in Marine Environments: Biochemistry and Physiological Ecology, *Michael P. Lesser* 253

**GASTROINTESTINAL PHYSIOLOGY,** *John Williams, Section Editor*

Brainstem Circuits Regulating Gastric Function, *R. Alberto Travagli, Gerlinda E. Hermann, Kirsteen N. Browning, and Richard C. Rogers* 279

Interstitial Cells of Cajal as Pacemakers in the Gastrointestinal Tract, *Kenton M. Sanders, Sang Don Koh, and Sean M. Ward* 307

Signaling for Contraction and Relaxation in Smooth Muscle of the Gut, *Karnam S. Murthy* 345

**Neurophysiology,** *Richard Aldrich, Section Editor*

CNG and HCN Channels: Two Peas, One Pod, *Kimberley B. Craven and William N. Zagotta* 375

**Renal and Electrolyte Physiology,** *Gerhard H. Giebisch, Section Editor*

Claudins and Epithelial Paracellular Transport, *Christina M. Van Itallie and James M. Anderson* 403

Role of FXYD Proteins in Ion Transport, *Haim Garty and Steven J.D. Karlish* 431

Sgk Kinases and Their Role in Epithelial Transport, *Johannes Loffing, Sandra Y. Flores, and Olivier Staub* 461

The Association of NHERF Adaptor Proteins with G Protein–Coupled Receptors and Receptor Tyrosine Kinases, *Edward J. Weinman, Randy A. Hall, Peter A. Friedman, Lee-Yuan Liu-Chen, and Shirish Shenolikar* 491

**Respiratory Physiology,** *Richard C. Boucher, Jr., Section Editor*

Stress Transmission in the Lung: Pathways from Organ to Molecule, *Jeffrey J. Fredberg and Roger D. Kamm* 507

Regulation of Normal and Cystic Fibrosis Airway Surface Liquid Volume by Phasic Shear Stress, *Robert Tarran, Brian Button, and Richard C. Boucher* 543

Chronic Effects of Mechanical Force on Airways, *Daniel J. Tschumperlin and Jeffrey M. Drazen* 563

The Contribution of Biophysical Lung Injury to the Development of Biotrauma, *Claudia C. dos Santos and Arthur S. Slutsky* 585

**Special Topic, TRP Channels,** *David E. Clapham, Special Topic Editor*

An Introduction to TRP Channels, *I. Scott Ramsey, Markus Delling, and David E. Clapham* 619

Insights on TRP Channels from In Vivo Studies in *Drosophila*, *Baruch Minke and Moshe Parnas* 649

Permeation and Selectivity of TRP Channels, *Grzegorz Owsianik, Karel Talavera, Thomas Voets, and Bernd Nilius* 685

TRP Channels in *C. elegans*, *Amanda H. Kahn-Kirby and Cornelia I. Bargmann* 719

Cumulative Index of Chapter Titles, Volumes 64–68 764

ERRATA
An online log of corrections to *Annual Review of Physiology* chapters may be found at http://physiol.annualreviews.org/errata.shtml

# Subject Index

A

Actin
  superfast muscle physiology and, 197
Activation
  cardiac regeneration and, 30–33
  CNG and HCN channels, 375–95
  interstitial cells of Cajal as pacemakers in GI tract and, 307
  signaling in smooth muscle of the gut and, 363
  superfast muscle physiology and, 196–206
  TRP channels in *C. elegans*, 719
  TRP channels in *Drosophila* and, 658–59, 661–70
Acute respiratory distress syndrome (ARDS)
  biophysical lung injury and biotrauma, 585–610
*Adamussium colbecki*
  oxidative stress in marine environments and, 267
Adaptation
  superfast muscle physiology and, 193
  TRP channels in *Drosophila* and, 674–75
Adaptive immunity
  myocardial inflammatory responses and, 74–86
Adenosine
  airway surface liquid volume and phasic shear stress, 543–57
Adenosine triphosphate (ATP)
  airway surface liquid volume and phasic shear stress, 552
  superfast muscle physiology and, 200, 205–6, 208, 210–11, 213–15, 218
  TRP channels in *Drosophila* and, 665–66
ADF neurons
  TRP channels in *C. elegans* and, 724
ADO-CFTR pathway
  airway surface liquid volume and phasic shear stress, 543–57
ADP ribose
  signaling in smooth muscle of the gut and, 350–51
$\beta_2$-adrenergic receptor
  NHERF adaptor proteins and, 493–94
Afferent gating
  brainstem circuits regulating gastric function and, 287–93
$Ag^+$
  TRP channel permeation and selectivity, 704
AGC kinases
  Sgk1 kinase and epithelial transport, 462–63
Age groups
  cardiac regeneration and, 29
  mechanical force and airways, 563–76
Agonist gating
  brainstem circuits regulating gastric function and, 287–93
Airway surface liquid (ASL) volume
  phasic shear stress and
    adenosine, 552–54
    altered ion transport, 545–46
    ATP, 552
    $Ca^{2+}$-activated $Cl^-$ channel, 552
    CFTR, 552–54
    conclusions, 556–57
    cystic fibrosis airway disease, 545–46, 555–56
    ENaC, 552–54
    generating phasic shear on airway surfaces, 550–51
    introduction, 543–44
    ion transport regulation, 548–52
    lung defense, 554–55
    modulating ion transport, 552–54
    $Na^+$, 552
    normal tidal breathing, 546–47
    phasic motion rebalances ASL height, 548
    salt transport, 544–45
    transduction by airway epithelia, 548–52
    water transport, 544–45
Akt proteins
  insulin resistance syndromes and, 142
Aldosterone
  Sgk1 kinase and epithelial transport, 468, 472–76

Allograft rejection
myocardial inflammatory responses and, 78
Alveolus
stress transmission in the lung and, 507–32
Amyloid
history of research, 21
Anandamide
introduction to TRP channels and, 620
signaling in smooth muscle of the gut and, 347
Angiopoietin-1
endothelial-cardiomyocyte interactions in cardiac development and repair, 55–56
Ankyrin
introduction to TRP channels and, 629
TRP channels in *C. elegans* and, 721
Anoxia
TRP channels in *Drosophila* and, 665
Anteroposterior chest radiography
biophysical lung injury and biotrauma, 589
Antigens
myocardial inflammatory responses and, 79–81
Antioxidants
oxidative stress in marine environments and, 253, 259–62
2-APB
introduction to TRP channels and, 620, 629
*Aplysia* spp.
history of research, 19
Apoptosis
biophysical lung injury and biotrauma, 606–7
cardiac regeneration and, 35
oxidative stress in marine environments and, 253
TRP channels in *C. elegans* and, 719, 730–31
Arachidonic acid
TRP channels in *C. elegans* and, 723
*Arenicola marina*
oxidative stress in marine environments and, 264
Ascorbic acid
oxidative stress in marine environments and, 260
ASE neurons
TRP channels in *C. elegans* and, 724
ASH neurons
TRP channels in *C. elegans* and, 720–25, 731
Aspartates
TRP channel permeation and selectivity, 697–98
Astrocytes
history of research, 16
Atelectrauma
biophysical lung injury and biotrauma, 588–89
ATPases
TRP channels in *C. elegans*, 719, 727–28
Atrophy
comparative physiology of food deprivation and, 223, 237–40
Auditory transduction mechanisms
history of research, 9–10
AWA neurons
TRP channels in *C. elegans* and, 720–23
AWC neurons
TRP channels in *C. elegans* and, 724
Axons
history of research, 18
introduction to TRP channels and, 619

**B**

$Ba^{2+}$
TRP channel permeation and selectivity, 694
BAPTA
interstitial cells of Cajal as pacemakers in GI tract and, 322–23, 329
TRP channels in *Drosophila* and, 658–62, 666
Barrier disruption
biophysical lung injury and biotrauma, 605–6
Basal metabolic rate
comparative physiology of food deprivation and, 231–32
*bcl2* gene
TRP channels in *C. elegans* and, 731
β-cell insulin receptor knockout
insulin resistance syndromes and, 131
BHQ
introduction to TRP channels and, 636
Bile acids
LXRs and FXR in cholesterol and fat metabolism, 159, 169–74
Biogenesis
TRP channels in *C. elegans* and, 719
Biomembrane models
history of research, 6
Biophysical lung injury
biotrauma and
apoptosis, 606–7
atelectrauma, 588–89
barrier disruption, 605–6
clinical relevance of biotrauma, 607–9
conclusions, 609–10
future implications for therapy, 607–9

gene expression changes, 591–97
immunomodulation, 599–604
introduction, 585–87
mechanical force, 605–6
mechanical injury, 587–89
multiorgan failure, 597–607
necrosis, 606–7
overdistension, 588–89
summary, 609–10
ventilator-induced lung injury, 589–97
Birds
comparative physiology of food deprivation and, 225–28
Body temperature
comparative physiology of food deprivation and, 232–33
Brain
history of research, 16–18, 20–21
insulin resistance syndromes and, 132–34
Brainstem circuits
regulating gastric function and
afferent gating, 287–93
agonist gating, 287–93
dorsal motor nucleus of the vagus, 281–85, 287–93
nucleus tractus solitarius, 280–81, 284–85, 287–93
opiates, 287–93
overview, 279–80
stomach, 280–93
summary, 293
synaptic connections, 284–85
vagal afferent fibers, 280–93
vagal efferent (motor) control, 285–86
vago-vagal reflexes, 286–87
visceral afferent inputs to brainstem gastric control circuits, 280
Breathing
airway surface liquid volume and phasic shear stress, 546–47
BTS
superfast muscle physiology and, 208–11, 213

C

$Ca^{2+}$
cardiac regeneration and, 40, 42
interstitial cells of Cajal as pacemakers in GI tract and, 307–38
introduction to TRP channels and, 619–36
signaling in smooth muscle of the gut and, 345–65
superfast muscle physiology and, 193, 196–218
TRP channel permeation and selectivity, 685–710
TRP channels in *C. elegans* and, 719, 723–24, 728–30
TRP channels in *Drosophila* and, 649–75
$Ca^{2+}$-activated $Cl^-$ channel (CaCC)
airway surface liquid volume and phasic shear stress, 543–57
$Ca^{2+}$/calmodulin-dependent kinase (CaMKII)
TRP channels in *C. elegans* and, 723–24
$Ca^{2+}$-independent MLCKs
signaling in smooth muscle of the gut and, 355–57
Caenorhabditis elegans
claudins and epithelial paracellular transport, 408
introduction to TRP channels and, 628
Sgk1 kinase and epithelial transport, 462, 471
TRP channels in *C. elegans* and, 719
Calmidazolium
TRP channels in *Drosophila* and, 664
Calmodulin
interstitial cells of Cajal as pacemakers in GI tract and, 329
introduction to TRP channels and, 624–25
TRP channel permeation and selectivity, 688
TRP channels in *C. elegans* and, 723–24
TRP channels in *Drosophila* and, 663–64
Cancer
history of research, 18
Capillaries
endothelial-cardiomyocyte interactions
in cardiac development and repair, 51–62
Capsaicin
introduction to TRP channels and, 620
TRP channels in *C. elegans* and, 724–25
Carbachol
TRP channels in *Drosophila* and, 656
Cardiac allograft rejection
myocardial inflammatory responses and, 78
Cardiac regeneration
repopulating heart and cardiomyocyte transplantation, 33–34

cell cycle activation, 30–33
cell fusion events, 39–42
cell transplantation, 32–36
functional analyses, 40–42
intrinsic rate of cardiomyocyte cell cycle activity in vivo, 30–31
introduction, 29–43
manipulation of cardiomyocyte cell cycle in vivo, 31–32
monitoring fate of cardiomyogenic cells, 37–39
monitoring regenerative growth, 36–37
myocardial regenerative growth, 36–42
skeletal myoblast transplantation, 32–33
stem cell mobilization and/or homimg, 35–36
stem cell transplantation, 34–35
structural analyses, 36–40
summary, 42–43
transdifferentiation, 39–42
Cardiomyocytes
cardiac regeneration and, 29, 33–34, 37–39
endothelial-cardiomyocyte interactions
in cardiac development and repair, 51–62
Cardiomyopathies
myocardial inflammatory responses and, 74–75
Carotenoids
oxidative stress in marine environments and, 261
Catalase
oxidative stress in marine environments and, 260
Cation channels
TRP channel permeation and selectivity, 685–710
TRP channels in *C. elegans* and, 719
Caveolar sequestration
signaling in smooth muscle of the gut and, 359
$Cd^{2+}$
introduction to TRP channels and, 636
*cds* genes
TRP channels in *Drosophila* and, 651
*ced-11* gene
TRP channels in *C. elegans* and, 731
Cell-cell interaction
endothelial-cardiomyocyte interactions
in cardiac development and repair, 51–62
Cell cycle activation
cardiac regeneration and, 30–33
Cell fate
cardiac regeneration and, 37–39
Cell fusion
cardiac regeneration and, 39–42
Cell organization
endothelial-cardiomyocyte interactions
in cardiac development and repair, 60
Cell proliferation
cardiac regeneration and, 29
Cell surface molecular mobilities
history of research, 2–5
Cell survival
endothelial-cardiomyocyte interactions
in cardiac development and repair, 58–60
Sgk1 kinase and epithelial transport, 461–79
Cell transplantation
cardiac regeneration and, 29, 32–36
Charge discrimination
claudins and epithelial paracellular transport, 410–12
Charge-selective pores
claudins and epithelial paracellular transport, 409–12
Chemical kinetics
fluorescence correlation spectroscopy and, 1–2
Chemosensation
TRP channels in *C. elegans* and, 722
Chemotaxis
introduction to TRP channels and, 619
CHIF protein
FXYD proteins in ion transport and, 431–32, 434–35, 437–51
Chloroplasts
oxidative stress in marine environments and, 256
Cholesterol
LXRs and FXR in cholesterol and fat metabolism, 159–80
*Chondrus crispus*
oxidative stress in marine environments and, 264
Chronotropic mechanisms
interstitial cells of Cajal as pacemakers in GI tract and, 335–36
Cilia
TRP channels in *C. elegans* and, 719–20, 722, 725–28
*c-kit* gene

cardiac regeneration and, 35–36
$Cl^-$
airway surface liquid volume and phasic shear stress, 543–57
introduction to TRP channels and, 619
Claudins
epithelial paracellular transport and
acute regulation of claudin function, 416–18
charge discrimination, 410–12
charge-selective pores, 409–12
claudin superfamily, 405–9
conclusions, 421
conductance-flux paradox, 412
gene deletion models in mice, 412–14
human claudin mutations, 414–16
humoral regulation, 419–20
phosphorylation, 416–17
regulation of expression, 417–20
resistance, 410–12
size-selective pores, 409–12
therapeutic targets, 420
tight junctions, 403–5
transcriptional regulation, 419
*Clostridium botulinum*
signaling in smooth muscle of the gut and, 348, 352
CNBD
CNG and HCN channels, 375, 390–91, 393–95
Coexisting fluid domains
history of research, 6
Comparative physiology
food deprivation and, 223–44
superfast muscle physiology and, 194–95
Complex behaviors
TRP channels in *C. elegans* and, 723–24
Conductance-flux paradox
claudins and epithelial paracellular transport, 412
Conduction
transcription factors and congenital heart defects, 104–6
Confocal laser scanning microscopy (CLSM)
history of research, 11
Congenital heart defects (CHD)
transcription factors and
biochemical analysis, 109–13
cardiac transcription function, 109–13
conduction, 104–6
epicardial development, 108–9
*FOG2*, 103, 113
*GATA4*, 99–100, 110–11
heart development, 106–7
identification of transcription factors in human CHD, 98–103
introduction, 97–98
left/right patterning, 106–7
morphogenesis, 104–6
myocardium, 104–6
neural crest, 107–8
*NKX2.5*, 99, 110
outflow tract, 107–8
septation, 104–6
summary, 113–14
*TBX1*, 103, 113
*TBX5*, 100–1, 111–12
*TFAP2B*, 102–3, 112–13
transcriptional regulation of cardiac development, 103–4
*ZIC3*, 101–2, 112
Connexin 43
cardiac regeneration and, 39
Contraction
endothelial-cardiomyocyte interactions in cardiac development and repair, 51, 56–57
interstitial cells of Cajal as pacemakers in GI tract and, 307
signaling in smooth muscle of the gut and, 345–49, 351–58
stress transmission in the lung and, 516–18
Coral bleaching
oxidative stress in marine environments and, 268–69
Cornell Dots
history of research, 15
CPI-17
signaling in smooth muscle of the gut and, 354–55
Crickets
auditory transduction mechanisms and, 9–10
Cross-bridges
superfast muscle physiology and, 193, 196–98, 200–1, 203–6, 210, 215–18
$Cs^+$
TRP channel permeation and selectivity, 689, 692, 694
*cup-5* gene
TRP channels in *C. elegans* and, 719, 730–31
Cyclic adenosine monophosphate (cAMP)
signaling in smooth muscle

of the gut and, 362–63
Cyclic guanosine monophosphate (cGMP) signaling in smooth muscle of the gut and, 362–63
Cyclic nucleotide-gated (CNG) channels
HCN channels and activation mechanisms, 391–95
biophysical properties, 381–83
CNG channels, 376–78, 390–91
conclusions, 395
HCN channels, 378–80, 387–91
HCN2 C-terminal crystal structure, 385–91
introduction, 375–76
modulation, 383–85, 391
mutations, 391
permeability, 381–83
physiological roles, 376–80
similarity in structures, 380–81
voltage dependence, 383, 386
Cyclin D2
cardiac regeneration and, 36
Cystic fibrosis transmembrane conductance regulator (CFTR)
airway surface liquid volume and phasic shear stress, 543–57
NHERF adaptor proteins and, 494
Cysts
introduction to TRP channels and, 632–33
TRP channels in *C. elegans* and, 719, 725–26
Cytochalasin D
cardiac regeneration and, 41
Cytokines
cardiac regeneration and, 35
myocardial inflammatory responses and, 83–86
Cytoskeleton
stress transmission in the lung and, 507–32

**D**

Dark
TRP channels in *Drosophila* and, 664–68
Deactivation
signaling in smooth muscle of the gut and, 358–59
Dendritic cells
myocardial inflammatory responses and, 79–81
Depolarization
interstitial cells of Cajal as pacemakers in GI tract and, 307, 334
Desensitization
signaling in smooth muscle of the gut and, 358–59
Development
endothelial-cardiomyocyte interactions in cardiac development and repair, 51–62
mechanical force and airways, 563–76
transcription factors and congenital heart defects, 103–4, 106–9
DHPESBP dye
history of research, 19
Diabetes
type 2 insulin resistance syndromes and, 123–49
Diacylglycerol (DAG)
introduction to TRP channels and, 620
TRP channels in *Drosophila* and, 649–75
Digestion
comparative physiology of food deprivation and, 223, 237–44
Dihydropyridine
interstitial cells of Cajal as pacemakers in GI tract and, 307, 324, 333–35
Distending stress
stress transmission in the lung and, 525
Distension
mechanical force and airways, 563–76
Dorsal motor nucleus of the vagus
brainstem circuits regulating gastric function and, 279, 281–85, 287–93
Downstream signals
NHERF adaptor proteins and, 499
*Drosophila* spp.
claudins and epithelial paracellular transport, 408
introduction to TRP channels and, 622, 625–26
Sgk1 kinase and epithelial transport, 463
TRP channel permeation and selectivity, 686, 699, 705
TRP channels and, 649–75
TRP channels in *C. elegans* and, 719, 721, 728, 731
Dwelling in deep well
TRP channel permeation and selectivity, 693
Dynein
TRP channels in *C. elegans* and, 727
Dysadherin
FXYD proteins in ion

transport and, 432
Dyslipidemia
insulin resistance syndromes and, 123–49

E

Echocardiography
cardiac regeneration and, 40
Ecology
oxidative stress in marine environments and, 253–70
EDTA
TRP channel permeation and selectivity, 701–2
Effective temperature
stress transmission in the lung and, 525
*EGFP* gene
cardiac regeneration and, 39–40, 42
history of research, 13
*egl-9* gene
TRP channels in *C. elegans* and, 731
EGTA
TRP channels in *Drosophila* and, 657–58, 660–62
Eicosanoids
introduction to TRP channels and, 620
Eicosapentaenoic acid
TRP channels in *C. elegans* and, 723
Eisenman's theory
TRP channel permeation and selectivity, 691–92
Elasticity
mechanical force and airways, 575
stress transmission in the lung and, 512–13, 518
Electrical rhythmicity
interstitial cells of Cajal as pacemakers in GI tract and, 307, 325–31
Electrophysiology
history of research, 8–9
interstitial cells of Cajal as pacemakers in GI tract and, 308–13
Electrostatics
TRP channel permeation and selectivity, 691–92
Endoplasmic reticulum
oxidative stress in marine environments and, 256
Endothelial
cell-cardiomyocyte interactions
in cardiac development and repair
angiopoietin-1, 55–56
cardiomyocyte organization, 60
cardiomyocyte survival, 58–60
clinical approaches, 61
conclusions, 62
contraction, 56–57
development, 53–56
endothelin-1, 57
functional improvement, 57–58
introduction, 51–52
myocardium, 57–58
neuregulin-erbB, 54
neurofibromatosis type 1, 54
nitric oxide, 56–57
normal cardiac function, 56–57
PDGF-B, 54–55
regeneration, 57–61
regulation, 56–57
signaling, 54–55
transdifferentiation, 60–61
VEGF-A, 55
Endothelial shear stress
stress transmission in the lung and, 513–14
Endothelin-1
endothelial-cardiomyocyte interactions
in cardiac development and repair, 57
Energy expenditure
comparative physiology of food deprivation and, 228–37
Enterohepatic tissues/vasculature
LXRs and FXR in cholesterol and fat metabolism, 167–69, 171–74
Environmental factors
oxidative stress in marine environments and, 253–70
Epicardium
transcription factors and congenital heart defects, 108–9
Epidermal growth factor receptor (EGFR)
C terminus
NHERF adaptor proteins and, 500
Epithelial cells
mechanical force and airways, 563–76
Epithelial $Na^+$ channel (ENaC)
airway surface liquid volume and phasic shear stress, 543–57
Epithelial transport
Sgk1 kinase and, 461–79
*erbB* genes
endothelial-cardiomyocyte interactions
in cardiac development and repair, 54
Esophageal smooth muscle
signaling in smooth muscle of the gut and, 357–58
Excitation-contraction coupling

cardiac regeneration and, 41
endothelial-cardiomyocyte interactions
in cardiac development and repair, 51, 56–57
External protonation
history of research, 14

F

$F_0/F_1$ ATPase
TRP channels in *C. elegans* and, 719, 727–28
Farnesoid X receptor (FXR)
LXRs and
in cholesterol and fat metabolism, 159–80
Fasting
comparative physiology of food deprivation and, 223–44
Fat
insulin resistance syndromes and, 128–30
LXRs and FXR in cholesterol and fat metabolism, 159–80
*fat-3* gene
TRP channels in *C. elegans* and, 723
Fatty acids
TRP channels in *C. elegans* and, 723
Feeding
comparative physiology of food deprivation and, 223–44
Fetal development
mechanical force and airways, 563–76
Fibroblasts
mechanical force and airways, 563–76
FLP neurons
TRP channels in *C. elegans* and, 731
Fluorescence correlation spectroscopy
chemical kinetics and, 1–2
history of research, 11
Fluorophores
history of research, 13
Flux
claudins and epithelial paracellular transport, 412
TRP channel permeation and selectivity, 693
Focal adhesion complex
stress transmission in the lung and, 507, 514–16
*FOG2* transcription factor
transcription factors and congenital heart defects, 103, 113
Food deprivation
comparative physiology of
basal metabolic rate, 231–32
birds, 225–28
body temperature, 232–33
digestion, 237–44
energy stores relative to usage, 224–28
future directions, 244
introduction, 223–24
mammals, 225–28
metabolism, 240–44
overall fasting tolerance, 224–28
phases of fasting and starvation, 225–28
phenotypic plasticity of visceral organs, 237–40
physical activity, 233–34
reductions in energy expenditure, 228–37
reproduction, 234–37
resting metabolic rate, 231–32
specific dynamic action, 240–44
summary, 244
Force
stress transmission in the lung and, 507–32
Forskolin
NHERF adaptor proteins and, 494
Frictional stresses
tissue
stress transmission in the lung and, 513
Fucus evanescens
oxidative stress in marine environments and, 264
Functional analysis
cardiac regeneration and, 40–42
Furosemide
Sgk1 kinase and epithelial transport, 477
FXYD proteins
in ion transport
conclusions, 452
introduction, 431–32
membrane topology, 432–33
Na,K-ATPase, 436–52
physiological roles, 446–50
primary structure, 432
regulation of other ion transport proteins, 450–52
sequence homology, 432–33
structure-function relationships, 441–45
tissue distribution, 434–35

G

Gadus morhua
oxidative stress in marine environments and, 265
β-galactosidase
cardiac regeneration and, 37–39
Gas exchange
stress transmission in the

lung and, 507–32
Gastrointestinal (GI) tract
comparative physiology of food deprivation and, 223, 237–40
interstitial cells of Cajal as pacemakers in GI tract and, 307–38
signaling in smooth muscle of the gut and, 345–65
*GATA4* transcription factor
transcription factors and congenital heart defects, 97, 99–100, 110–11
Gating
brainstem circuits regulating gastric function and, 287–93
CNG and HCN channels, 375–95
$Gd^{3+}$
introduction to TRP channels and, 626
*gem-4* gene
TRP channels in *C. elegans* and, 730
Gender differences
superfast muscle physiology and, 215
TRP channels in *C. elegans* and, 719, 725–27
Giant unilamellar vesicles
history of research, 6
Glassy dynamics
stress transmission in the lung and, 521–25
Glucocorticoids
Sgk1 kinase and epithelial transport, 461–79
Glucose
insulin resistance syndromes and, 123–49
LXRs and FXR in cholesterol and fat metabolism, 167, 176–77
Glutathione (GSH)
oxidative stress in marine environments and, 261
Goldman-Hodgkin-Katz theory
TRP channel permeation and selectivity, 688–91
*gon-2* gene
TRP channels in *C. elegans* and, 719, 728, 730
Gonads
TRP channels in *C. elegans* and, 719
G protein–coupled receptors
NHERF adaptor proteins and, 491, 493–94
G proteins
signaling in smooth muscle of the gut and, 346–47, 352–54, 358–62
TRP channels in *C. elegans* and, 719, 723
Green fluorescent protein (GFP)
history of research, 13–14
TRP channels in *C. elegans* and, 722
GRK-mediated receptor desensitization
signaling in smooth muscle of the gut and, 358
Growth cone guidance
introduction to TRP channels and, 619, 627, 633–35
GTL-2 channel
TRP channels in *C. elegans* and, 719

## H

$H^+$
introduction to TRP channels and, 627–28
Heart
cardiac regeneration and, 29–43
endothelial-cardiomyocyte interactions
in cardiac development and repair, 51–62
myocardial inflammatory responses and, 67–87
transcription factors and congenital heart defects, 97
Hermaphrodites
TRP channels in *C. elegans* and, 725
Heterokaryons
cardiac regeneration and, 40
Heterologous systems
TRP channels in *Drosophila* and, 655–63, 668–70
Hippocampus
history of research, 18
Histamine
TRP channels in *Drosophila* and, 656, 659
Histostain
history of research, 21
Homeostasis
airway surface liquid volume and phasic shear stress, 543–57
FXYD proteins in ion transport and, 431–52
LXRs and FXR in cholesterol and fat metabolism, 159–80
TRP channels in *C. elegans* and, 719, 730
Homing
stem cell
cardiac regeneration and, 35–36
"Hopping over barriers"
TRP channel permeation and selectivity, 693
Humoral regulation
claudins and epithelial paracellular transport, 419–20
Hydrodynamics
TRP channel permeation

and selectivity, 692–93
Hydrogen peroxide
oxidative stress in marine environments and, 253, 255
Hydroxyl radicals
oxidative stress in marine environments and, 253, 255
Hyperpolarization-activated cyclic nucleotide–modulated (HCN) channels
CNG channels and, 375–95
Hypertension
insulin resistance syndromes and, 123–49
Hypothalamic insulin receptor knockout
insulin resistance syndromes and, 133–34
Hypoxia
biophysical lung injury and biotrauma, 585
history of research, 17

I

Icilin
introduction to TRP channels and, 620
Immune response
biophysical lung injury and biotrauma, 585–610
myocardial inflammatory responses and, 67–87
INAD protein
TRP channels in *Drosophila* and, 649, 652–55, 671–72, 674
Inflammatory response
biophysical lung injury and biotrauma, 585–610
myocardial inflammatory responses and, 67–87
Innate immunity
myocardial inflammatory responses and, 70–74, 85–86
Inositol 1,4,5-triphosphate ($IP_3$)
interstitial cells of Cajal as pacemakers in GI tract and, 307, 327, 329, 333, 335–36
signaling in smooth muscle of the gut and, 350
Inositol lipid signaling
TRP channels in *Drosophila* and, 649, 667
Insulin resistance syndromes
Akt, 142
β-cell insulin receptor knockout, 131
brain insulin receptor knockout/knockdown, 132–34
conclusions, 148–49
fat insulin receptor knockout, 128–30
humans, 146–48
hypothalamic insulin receptor knockout, 133–34
insulin action, 125–35
insulin resistance, 125–35
introduction, 123–25
knockouts, 139–43
liver insulin receptor knockout, 125–27
MAP kinase pathway, 138, 142
molecular mechanisms, 143–44
mouse model, 144–46
mTOR, 139
muscle insulin receptor knockouts, 127–28
neuronal insulin receptor knockout, 132–33
phosphatidylinositol 3-kinase, 136–38, 140–42
proximal insulin signaling, 135–41
signaling, 135–48
SREBP-1c, 138–39, 143
targets, 137–38
tissue-specific analysis, 125–35
vascular endothelium insulin receptor knockout, 131–32
Integrin-linked kinase
signaling in smooth muscle of the gut and, 345, 356–57
Interfacial stresses
stress transmission in the lung and, 512–13
Interferon-γ (IFN-γ)
myocardial inflammatory responses and, 83–86
Interleukin-12 (IL-12)
myocardial inflammatory responses and, 83–85
Interstitial cells of Cajal (ICC)
as pacemakers in gastrointestinal tract
chronotropic mechanisms, 335–36
electrical rhythmicity, 325–31
electrophysiology of gastrointestinal muscles, 308–13
gastrointestinal pathologies, 337–38
integrated responses, 337–38
introduction, 307–8
overview, 313–15
role, 336–37
slow waves, 315–17, 326, 331–35
structural features, 317–21
unitary currents, 321–25
Intrauterine development
mechanical force and airways, 563–76

Ion channels
CNG and HCN channels, 375–95
introduction to TRP channels and, 619–36
Ion transport
airway surface liquid volume and phasic shear stress, 543–57
FXYD proteins in ion transport and, 431–52
Sgk1 kinase and epithelial transport, 461–79
Ischemia-reperfusion injury
myocardial inflammatory responses and, 70–72

K

$K^+$
FXYD proteins in ion transport and, 431
introduction to TRP channels and, 619, 636
Sgk1 kinase and epithelial transport, 476
TRP channel permeation and selectivity, 686, 689, 692, 694, 696, 701, 706
Kidneys
introduction to TRP channels and, 632–33
Sgk1 kinase and epithelial transport, 461–79
TRP channels in *C. elegans* and, 719, 725–26
Kinases
NHERF adaptor proteins and, 499–500
Sgk1 kinase and epithelial transport, 461–79
signaling in smooth muscle of the gut and, 345, 352–57, 362
Kinesins
TRP channels in *C. elegans* and, 719, 726
Kinetics
fluorescence correlation spectroscopy and, 1–2
FXYD proteins in ion transport and, 431
superfast muscle physiology and, 193–217
*klp-6* gene
TRP channels in *C. elegans* and, 719, 727
Knockdowns
insulin resistance syndromes and, 132–34
Knockouts
insulin resistance syndromes and, 123, 125–34, 139–43
*Krd* genes
introduction to TRP channels and, 633

L

$La^{3+}$
introduction to TRP channels and, 626
TRP channel permeation and selectivity, 701
TRP channels in *Drosophila* and, 673–74
*LacZ* reporter gene
cardiac regeneration and, 39
Laser microscopy
history of research, 11–13
Laternula elliptica
oxidative stress in marine environments and, 267
Left/right patterning
transcription factors and congenital heart defects, 106–7
Left ventricular
pressure-volume measurements
cardiac regeneration and, 40
Length scales
stress transmission in the lung and, 512–18
$Li^+$
TRP channel permeation and selectivity, 692, 694
Ligand gating
introduction to TRP channels and, 619
Light
TRP channels in *Drosophila* and, 670–76
Line tension
history of research, 6
Linoleic acid
TRP channels in *Drosophila* and, 657
Lipids
insulin resistance syndromes and, 123–49
LXRs and FXR in cholesterol and fat metabolism, 159–80
oxidative stress in marine environments and, 257
TRP channels in *Drosophila* and, 649–75
Lipofuscin
history of research, 20
Liquid volume
airway surface
phasic shear stress and, 543–57
Liver
insulin resistance syndromes and, 125–27
Liver X receptors (LXRs)
farnesoid X receptor (FXR) and
appendix, 179–80
conclusions, 177–78
disclosure statement, 180
enterohepatic circulation, 171–74
future issues to be resolved, 179
FXR and bile acid homeostasis, 169–74

FXR and glucose metabolism, 176–77
FXR and triglyceride metabolism, 174–75
genes, 161–62
glucose metabolism, 167
introduction, 159–63
LXR action outside enterohepatic tisues and vasculature, 167–69
LXRs as master regulators of fat metabolism, 165–67
LXRs maintain cholesterol homeostasis, 163–65
summary points, 178–79
Localization
TRP channels in *C. elegans* and, 719, 722, 727–28
Long-term adaptation
TRP channels in *Drosophila* and, 674–75
*lov-1* gene
TRP channels in *C. elegans* and, 725–28
Lungs
airway surface liquid volume and phasic shear stress, 543–57
biophysical lung injury and biotrauma, 585–610
mechanical force and airways, 563–76
stress transmission in the lung and, 507–32
Lymphatic drainage
myocardial inflammatory responses and, 79–81
Lysosomes
TRP channels in *C. elegans* and, 719

M

Magnetic resonance imaging (MRI)
cardiac regeneration and, 40, 42
Male mating behavior
TRP channels in *C. elegans* and, 725–27
Male-specific neurons
TRP channels in *C. elegans* and, 719, 726–27
Mammals
claudins and epithelial paracellular transport, 412–14
comparative physiology of food deprivation and, 225–28
insulin resistance syndromes and, 144–46
introduction to TRP channels and, 619–36
myocardial inflammatory responses and, 76–77
TRP channels in *C. elegans* and, 724–25
TRP channels in *Drosophila* and, 675–76
Marine environments
oxidative stress in, 253–70
Mastocarpus stellatus
oxidative stress in marine environments and, 264
Mat-8 protein
FXYD proteins in ion transport and, 431–34, 437
Mating behavior
TRP channels in *C. elegans* and, 725–27
Mechanical force
chronic effects of on airways
air-filled airways, 569
airway cells in culture, 571–75
airway responses, 569–71
cellular responses, 575
conclusions, 575–76
developing airways in utero, 564–66
epithelium, 572–74
fetal airway cell responses to mechanical stress, 566–68
introduction, 563–64
multicellular models, 574–75
nonlinear elasticity, 575
smooth muscle, 571–72
Mechanical stress
stress transmission in the lung and, 507–32
Mechanical ventilation
biophysical lung injury and biotrauma, 585–606
Mechanosensing
stress transmission in the lung and, 525–28
TRP channels in *C. elegans* and, 719, 731
Melastatin
introduction to TRP channels and, 630
TRP channels in *C. elegans* and, 720
Membrane rafts
history of research, 5–8, 22
Membrane topology
FXYD proteins in ion transport and, 432–33
Metabolism
biophysical lung injury and biotrauma, 585
comparative physiology of food deprivation and, 223–44
history of research, 17
LXRs and FXR in cholesterol and fat metabolism, 159–80
TRP channels in *Drosophila* and, 657, 665–67
$Mg^{2+}$

introduction to TRP channels and, 620, 626, 631–32
superfast muscle physiology and, 212
TRP channel permeation and selectivity, 689, 695, 697, 700–3, 705, 707, 709
TRP channels in *C. elegans* and, 719, 730
TRP channels in *Drosophila* and, 656
Mibefradil
interstitial cells of Cajal as pacemakers in GI tract and, 335
Microbodies
oxidative stress in marine environments and, 256–57
Midshipman
superfast muscle physiology and, 214–16
Mitochondria
interstitial cells of Cajal as pacemakers in GI tract and, 307, 328–29, 331
oxidative stress in marine environments and, 256
Mitogen-activated protein (MAP) kinases
insulin resistance syndromes and, 138, 142
$MLC_{20}$ phosphorylation
signaling in smooth muscle of the gut and, 345, 349, 351–58
$Mn^{2+}$
TRP channel permeation and selectivity, 694
Mobilization
stem cell
cardiac regeneration and, 35–36
Modulation
CNG and HCN channels, 375–95
Molecular switch
NHERF adaptor proteins and, 499
Montastraea faveolata
oxidative stress in marine environments and, 270
Morphogenesis
mechanical force and airways, 563–76
transcription factors and congenital heart defects, 104–6
Motor control
vagal efferent
brainstem circuits regulating gastric function and, 285–86
Mouse ovary fluorescence
history of research, 21
mTOR protein
insulin resistance syndromes and, 139
Mucolipins
TRP channels in *C. elegans* and, 720, 730–31
Mucus clearance
airway surface liquid volume and phasic shear stress, 543–57
Multicellular modeling
mechanical force and airways, 574–75
Multiorgan failure
biophysical lung injury and biotrauma, 585–86, 597–607
Multiphoton microscopy
history of research, 10–19, 23
Murray's law
stress transmission in the lung and, 513–14
Muscle
insulin resistance syndromes and, 127–28
interstitial cells of Cajal as pacemakers in GI tract and, 307–38
mechanical force and airways, 563–76
signaling in smooth muscle of the gut and, 345–65
superfast muscle physiology and, 193–221
Mya arenaria
oxidative stress in marine environments and, 267
Myoblasts
cardiac regeneration and, 32–33
Myocardial inflammatory responses
adaptive immunity, 74–86
anatomical considerations, 68–69
animal models, 76–77
anti-inflammatory mechanisms, 78–86
cardiac allograft rejection, 78
conclusions, 86–87
dendritic cells, 79–81
functional considerations, 68–69
heart antigens, 79–81
IFN-$\gamma$, 83–86
IL-12, 83–85
immunological quiescence of naïve myocardium, 68–69
inflammation, 69–86
inflammatory cardiomyopathies, 74–75
innate immunity, 70–74, 85–86
introduction, 67–68
ischemia-reperfusion injury, 70–72
lymphatic drainage, 79–81
myocarditis, 76–78
neutrophils, 85–86
regulatory mechanisms, 78–86
summary, 86–87
T cells, 78–86

Myocardium
cardiac regeneration and, 29, 36–42
endothelial-cardiomyocyte interactions
in cardiac development and repair, 51–62
transcription factors and congenital heart defects, 104–6
Myosin
superfast muscle physiology and, 193, 200, 210, 216–17
Myosin light chain
signaling in smooth muscle of the gut and, 345, 349, 351–58
Myosin light chain kinases
signaling in smooth muscle of the gut and, 355–57
Myosin light chain phosphatases
signaling in smooth muscle of the gut and, 345, 354–55
MYPT1 protein
signaling in smooth muscle of the gut and, 354–55

## N

$Na^+$
airway surface liquid volume and phasic shear stress, 543–57
FXYD proteins in ion transport and, 431
introduction to TRP channels and, 619, 622–23
Sgk1 kinase and epithelial transport, 461, 472–76
TRP channel permeation and selectivity, 686, 690–95, 703, 706–7
$Na^+$-dependent phosphate transport
NHERF adaptor proteins and, 499
NADH fluorescence
history of research, 16–17, 20
Na,K-ATPase
FXYD proteins in ion transport and, 431, 436–52
Necrosis
biophysical lung injury and biotrauma, 606–7
Nereis diversicolor
oxidative stress in marine environments and, 264
Netrin-1
introduction to TRP channels and, 635–36
Neural crest
transcription factors and congenital heart defects, 107–8
Neuregulin-erbB
endothelial-cardiomyocyte interactions
in cardiac development and repair, 54
Neuroethology
superfast muscle physiology and, 206–11
Neurofibrillary tangles
history of research, 20
Neurofibromatosis type 1
endothelial-cardiomyocyte interactions
in cardiac development and repair, 54
Neuronal insulin receptor knockout
insulin resistance syndromes and, 132–33
Neurons
history of research, 16, 19
introduction to TRP channels and, 628, 633, 636
TRP channels in *C. elegans* and, 719–27, 731
Neurotransmitters
signaling in smooth muscle of the gut and, 359–60
Neutrophils
myocardial inflammatory responses and, 85–86
*NF1* gene
endothelial-cardiomyocyte interactions
in cardiac development and repair, 54
NHE3 protein
NHERF adaptor proteins and, 494
NHERF adaptor proteins
$\beta_2$-adrenergic receptor, 493–94
CFTR, 494
conclusions, 500–1
downstream signals, 499
EGFR C terminus, 500
G protein-coupled receptors, 493–94
introduction, 492
molecular switch, 499
NHE3, 494
NHERF-1, 493–94
κ-opioid receptor, 494–97
PDGFR, 499–500
PTH1R, 497–99
receptor tyrosine kinases, 499–500
sodium-dependent phosphate transport, 499
trafficking, 496–98
Nicardipine
interstitial cells of Cajal as pacemakers in GI tract and, 334
Nimodipine
introduction to TRP channels and, 636
*ninaE* gene
TRP channels in *Drosophila* and, 651, 660
Nitric oxide (NO)

endothelial-cardiomyocyte interactions
in cardiac development and repair, 56–57
*NKX2.5* transcription factor
transcription factors and congenital heart defects, 97, 99, 110
$NMDG^+$
introduction to TRP channels and, 628
TRP channel permeation and selectivity, 699
Nociception
TRP channels in *C. elegans* and, 720–23
Nonlinear elasticity
mechanical force and airways, 575
*norpA* gene
TRP channels in *Drosophila* and, 651, 660, 667
Nucleotides
airway surface liquid volume and phasic shear stress, 543–57
CNG and HCN channels, 375–95
Nucleus
brainstem circuits regulating gastric function and, 279, 281–85
stress transmission in the lung and, 521
Nucleus tractus solitarius
brainstem circuits regulating gastric function and, 279–81, 284–85, 287–93

**O**

Obesity
insulin resistance syndromes and, 123–49
*ocr* genes
TRP channels in *C. elegans* and, 720, 722–25, 731
*odr-10* gene
TRP channels in *C. elegans* and, 722–23
Olfaction
TRP channels in *C. elegans* and, 719–23
OLQ neurons
TRP channels in *C. elegans* and, 731
Omega-3 fatty acids
TRP channels in *C. elegans* and, 723
Opiates
brainstem circuits regulating gastric function and, 287–93
κ-Opioid receptor
NHERF adaptor proteins and, 494–97
Opioids
signaling in smooth muscle of the gut and, 347
*Opsanus tau*
superfast muscle physiology and, 193, 195–217
Orthology
TRP channels in *C. elegans* and, 724–25
*osm* genes
TRP channels in *C. elegans* and, 720–25, 731
Osmosensation
TRP channels in *C. elegans* and, 719, 723
Outflow tract
transcription factors and congenital heart defects, 107–8
Ovaries
history of research, 21
Overdistension
biophysical lung injury and biotrauma, 588–89
Oxidative stress
in marine environments
antioxidants, 259–62
ascorbic acid, 260
carotenoids, 261
catalase, 260
chloroplasts, 256
conclusions, 270
early history of oxygen, 253–54
endoplasmic reticulum, 256
enzymatic antioxidants, 259–60
future directions, 270
glutathione, 261
hydrogen peroxide, 255
hydroxyl radical, 255
introduction, 253–57
marine organisms, 262–65
microbodies, 256–57
mitochondria, 256
nonenzymatic antioxidants, 260–62
oxidative damage
DNA, 257–58
lipids, 257
proteins, 257
peroxidases, 260
physiological extremes, 266–70
reactive nitrogen species, 255–56
reactive oxygen species, 254–59, 262
seawater, 262
signal transduction, 258–59
singlet oxygen, 254
small-molecule antioxidants, 261–62
superoxide dismutase, 259–60
superoxide radicals, 254–55
theory of oxygen toxicity, 254
tocopherol, 261

Oxygen
oxidative stress in marine environments and, 253–70

**P**

Pacemakers
interstitial cells of Cajal as in GI tract, 307–38
Paracellular transport
claudins and epithelial paracellular transport, 403
Parathyroid hormone receptor
NHERF adaptor proteins and, 497–99
Parvalbumin
superfast muscle physiology and, 193, 195–96, 208–9, 211–15, 218
Patterning
transcription factors and congenital heart defects, 106–7
Permeability
CNG and HCN channels, 381–83
Permeation
TRP channel permeation and selectivity, 685–710
Permselectivity
claudins and epithelial paracellular transport, 403
Peroxidases
oxidative stress in marine environments and, 260
Phasic contractions
interstitial cells of Cajal as pacemakers in GI tract and, 307
Phasic shear stress
airway surface liquid volume and, 543–57
Phenotypic plasticity
comparative physiology of food deprivation and, 223, 237–40
Phosphatases
signaling in smooth muscle of the gut and, 345, 354–55
Phosphate
NHERF adaptor proteins and, 499
Phosphatidylinositol 3-kinase
insulin resistance syndromes and, 136–38, 140–42
Phosphohippolin
FXYD proteins in ion transport and, 432, 434
Phosphoinositides
introduction to TRP channels and, 620
Phospholemman
FXYD proteins in ion transport and, 431–32, 434
Phospholipase C (PLC)
TRP channels in *Drosophila* and, 649–75
Phospholipases
signaling in smooth muscle of the gut and, 347–48
Phosphorylation
claudins and epithelial paracellular transport, 416–17
Sgk1 kinase and epithelial transport, 461–79
signaling in smooth muscle of the gut and, 345, 349, 351–59
Photobacterium leiognathi
oxidative stress in marine environments and, 263
Photobleaching
history of research, 15
Photoreceptor cells
TRP channels in *Drosophila* and, 664–68
Phototransduction
TRP channels in *Drosophila* and, 651–55
Physical activity
comparative physiology of food deprivation and, 233–34
Physiological ecology
oxidative stress in marine environments and, 253–70
Physiological extremes
oxidative stress in marine environments and, 266
Pichia pastoris
FXYD proteins in ion transport and, 441
*Pik3r* genes
insulin resistance syndromes and, 136–38
$PIP_2$ depletion
TRP channels in *Drosophila* and, 667–68
*pkd* genes
introduction to TRP channels and, 632–33
TRP channels in *C. elegans*, 725–28
$PLA_2$
cytoplasmic
signaling in smooth muscle of the gut and, 349
Platelet-derived growth factor receptor (PDGFR)
NHERF adaptor proteins and, 499–500
Platelet-derived growth factor-β (PDGF-β)
endothelial-cardiomyocyte interactions
in cardiac development and repair, 54–55
Pollution
oxidative stress in marine environments and, 253, 261
Polycystic kidney disease
introduction to TRP channels and, 632–33
TRP channels in *C. elegans* and, 719, 725–26

Polycystin
introduction to TRP channels and, 632–33
TRP channels in *C. elegans* and, 720, 725–27
Polyunsaturated fatty acids (PUFAs)
TRP channels in *C. elegans* and, 719, 723
Pores
claudins and epithelial paracellular transport, 409–12
TRP channel permeation and selectivity, 685–710
*Porichthys notatus*
superfast muscle physiology and, 214–16
Positron emission tomography (PET)
cardiac regeneration and, 40
Pressure
stress transmission in the lung and, 507–32
Protein kinase A (PKA)
signaling in smooth muscle of the gut and, 363
Protein kinase C (PKC)
signaling in smooth muscle of the gut and, 354–55
TRP channels in *Drosophila* and, 671–72
Protein kinase G (PKG)
signaling in smooth muscle of the gut and, 363
Proximal insulin signaling
insulin resistance syndromes and, 135–41
Pseudogenes
TRP channels in *C. elegans* and, 720
Pulmonary trauma
biophysical lung injury and biotrauma, 585–610
PVD neurons
TRP channels in *C. elegans* and, 731
*Pyrococcus furiosus*
oxidative stress in marine environments and, 263
*Python molurus*
comparative physiology of food deprivation and, 242

**Q**

Qdots
history of research, 15
Quantitative energetics
superfast muscle physiology and, 205–6
Quenching
history of research, 14

**R**

*Rana temporaria*
superfast muscle physiology and, 201
$Rb^+$
TRP channel permeation and selectivity, 692
*rdgA* gene
TRP channels in *Drosophila* and, 651, 666
Reactive nitrogen species (RNS)
oxidative stress in marine environments and, 255–56
Reactive oxygen species (ROS)
oxidative stress in marine environments and, 253–59, 262
Receptor tyrosine kinases
NHERF adaptor proteins and, 499–500
Red fluorescent protein (RFP)
history of research, 13
Reflexes
vago-vagal
brainstem circuits regulating gastric function and, 286–87
Regeneration
cardiac, 29–43, 57–61
Regulation
airway surface liquid volume and phasic shear stress, 543–57
claudins and epithelial paracellular transport, 416–20
FXYD proteins in ion transport and, 450–52
LXRs and FXR in cholesterol and fat metabolism, 165–67
myocardial inflammatory responses and, 78–86
Sgk1 kinase and epithelial transport, 466–70
signaling in smooth muscle of the gut and, 362–63
transcription factors and congenital heart defects, 103–4
TRP channel permeation and selectivity, 701–5
TRP channels in *C. elegans* and, 719, 723–24
Relaxation
signaling in smooth muscle of the gut and, 345, 359–65
superfast muscle physiology and, 193, 196–206
Remodeling
mechanical force and airways, 563–76
stress transmission in the lung and, 507–32
Repopulation
cardiac regeneration and, 29–43
Reporter genes
cardiac regeneration and, 37–40
Reproduction
comparative physiology of food deprivation

and, 234–37
Resistance
claudins and epithelial paracellular transport, 410–12
Respiratory failure
biophysical lung injury and biotrauma, 585–610
Resting metabolic rate
comparative physiology of food deprivation and, 231–32
RGS proteins
signaling in smooth muscle of the gut and, 358–59
Rhabdomeres
TRP channels in *Drosophila* and, 671–73
RhoA protein
signaling in smooth muscle of the gut and, 352–54
Rhod-2 calcium-sensitive fluorescent indicator
cardiac regeneration and, 40–42
Rhodamine
history of research, 13
Rhodopsin
TRP channels in *Drosophila* and, 659
Rho kinase
signaling in smooth muscle of the gut and, 345, 352–54
RIC protein
FXYD proteins in ion transport and, 431–32, 434
Ryanodine
introduction to TRP channels and, 636
signaling in smooth muscle of the gut and, 350–51

S

Salt transport
airway surface liquid volume and phasic shear stress, 544–45
*sca-1* gene
cardiac regeneration and, 35–36
Scale-free behavior
stress transmission in the lung and, 521–25
Seawater
oxidative stress in marine environments and, 262
Second harmonic generation microscopy
history of research, 16, 18–19
Selectivity filter
TRP channel permeation and selectivity, 685–710
TRP channels in *C. elegans* and, 721
Sensory signal transduction
TRP channels in *C. elegans* and, 719–27, 731
Sepsis
biophysical lung injury and biotrauma, 589
Septation
transcription factors and congenital heart defects, 104–6
Sequence homology
FXYD proteins in ion transport and, 432–33
Serine/threonine kinase inducible
Sgk1 kinase and epithelial transport, 462
Serotonin
history of research, 20
Sgk1 kinase
epithelial transport and
AGC kinases, 462–63
aldosterone-dependent $Na^+$ reabsorption, 472–76
appendix, 478–79
conclusions, 478
inducible serine/threonine kinase, 462
introduction, 461
pathophysiological role of Sgk1, 476–77
perspective, 478
phosphorylation, 466–70
regulation, 466–70
renal $K^+$ secretion, 476
Sgk2, 464–66
Sgk3, 464–66
target proteins, 467–70
tissue distribution of Sgk isoforms, 470–72
ubiquitylation, 467–70
Shape stability of stress-supported structures
stress transmission in the lung and, 519–20
Shear stress
phasic
airway surface liquid volume and, 543–57
stress transmission in the lung and, 513–14
Side-population phenotype
cardiac regeneration and, 35
Signaling
endothelial-cardiomyocyte interactions
in cardiac development and repair, 54–55
insulin resistance syndromes and, 135–48
introduction to TRP channels and, 619
NHERF adaptor proteins and, 499
oxidative stress in marine environments and, 258–59
in smooth muscle of the gut
activation, 363
$Ca^{2+}$-dependent initial contraction, 351–52

$Ca^{2+}$-independent MLCKs, 355–57
$Ca^{2+}$-independent sustained contraction, 352
$Ca^{2+}$ mobilization in circular and longitudinal smooth muscle, 350–51
cAMP, 362–63
caveolar sequestration, 359
cGMP, 362–63
contraction, 346–49, 351–58
CPI-17, 354–55
cyclic ADP ribose, 350–51
cytoplasmic PLA2, 349
deactivation, 358–59
desensitization, 358–59
esophageal smooth muscle, 357–58
$G\alpha_{i1/2}$, 359
G proteins, 346–47, 352–54, 358–62
GRK-mediated receptor desensitization, 358
integrin-linked kinase, 356–57
introduction, 346–47
$IP_3$, 350
kinases, 363
messengers, 359–60
MLC phosphatase, 354–55
$MLC_{20}$ phosphorylation, 351–58
MLCKs, 355–57
molecular targets, 363
MYPT1, 354–55
phospholipase D, 348
phosphorylation, 359

PKG, 363
PLC-β1, 347–48
PLC-β3, 347–48
PLC-δ1, 348
receptors, 346–47, 360–62
regulation, 362–63
relaxant neurotransmitters, 359–60
relaxation, 359–65
RGS proteins, 358–59
RhoA, 352–54
Rho kinase, 352–54
ryanodine receptors, 350–51
ZIP kinase, 356–57
TRP channels in *C. elegans* and, 719–27, 731
TRP channels in *Drosophila* and, 649–75
Single-pore aspartates
TRP channel permeation and selectivity, 697–98
Singlet oxygen
oxidative stress in marine environments and, 253–54
Six-transmembrane channel structure
introduction to TRP channels and, 619, 622–25
Size-selective pores
claudins and epithelial paracellular transport, 409–12
Skeletal muscle
superfast muscle physiology and, 193–218
Skeletal myoblast transplantation
cardiac regeneration and, 32–33
SKF-96365
introduction to TRP channels and, 636
Slow waves
interstitial cells of Cajal as pacemakers in GI tract and, 307, 315–17, 326, 331–35
Smooth muscle cells
interstitial cells of Cajal as pacemakers in GI tract and, 307–38
mechanical force and airways, 563–76
signaling in smooth muscle of the gut and, 345–65
Sono-micrometry
cardiac regeneration and, 40
Sound production
superfast muscle physiology and, 193, 195, 206–8, 211–16
*spe-41* gene
TRP channels in *C. elegans* and, 728
Specific dynamic action
comparative physiology of food deprivation and, 223, 240–44
Speed
superfast muscle physiology and, 193–217
Sperm activation
TRP channels in *C. elegans* and, 719
Splice variants
introduction to TRP channels and, 619
$Sr^{2+}$
TRP channel permeation and selectivity, 694
SREBP-1c protein
insulin resistance syndromes and, 138–39, 143
Starvation
comparative physiology of food deprivation and, 223–44
Stathmin-2
introduction to TRP channels and, 636

Stem cells
cardiac regeneration and, 29, 34–36
Sterols
LXRs and FXR in cholesterol and fat metabolism, 159–80
Stomach
brainstem circuits regulating gastric function and, 280–93
Store-operated $Ca^{2+}$ (SOCE) entry process
introduction to TRP channels and, 621–22
TRP channels in *C. elegans* and, 719
*Streptomyces lividans*
CNG and HCN channels, 380
Stress response
mechanical force and airways, 563–76
oxidative stress in marine environments and, 253–70
stress transmission in the lung and, 507–32
Stress transmission
in the lung
conclusions, 531–32
contratile machinery, 516–18
cytoskeleton, 516–25
distending stress, 525
effective temperature, 525
elastic similarity, 518
endothelial shear stress, 513–14

shape stability of stress-supported structures, 519–20
stress invariants, 512–18
structural damping law, 513
time scales, 512–18
tissue elastic tresses, 512–13
transpulmonary pressure, 511–12
Stretch
biophysical lung injury and biotrauma, 585
stress transmission in the lung and, 507–32
Structural analysis
cardiac regeneration and, 36–40
Structural damping law
stress transmission in the lung and, 513
Structure-function relationships
FXYD proteins in ion transport and, 441–45
Superfast muscles
activation-relaxation cycle, 196–206
calcium cycling in vivo, 206–14
comparative physiology, 194–95
conclusions, 217–18
function, 193–94
integrative approaches to study of muscle function, 194
introduction, 193–94
midshipman, 214–16
mutually exclusive designs, 204–5
parvalbumin, 211–14
quantitative biochemistry, 206–11
quantitative energetics, 205–6
quantitative neuroethology, 206–11
speed, 196–206
temperature effects, 216–17
toadfish swimbladder muscle, 195–217
trading force for speed, 204
Superoxide dismutase (SOD)
oxidative stress in marine environments and, 253, 259–60
Superoxide radicals
oxidative stress in marine environments and, 253–55
Synaptic connections
brainstem circuits regulating gastric function and, 284–85

## T

Targeting
claudins and epithelial paracellular transport, 420
insulin resistance syndromes and, 137–38
Sgk1 kinase and epithelial transport, 467, 469–70
signaling in smooth muscle of the gut and, 363
Tau protein
history of research, 20
TBQ

superfast muscle physiology and, 210
*TBX* genes
transcription factors and congenital heart defects, 100–1, 103, 111–13
T cells
myocardial inflammatory responses and, 78–87
$TEA^+$
TRP channel permeation and selectivity, 699
Temperature
comparative physiology of food deprivation and, 232–33
stress transmission in the lung and, 525
superfast muscle physiology and, 216–17
*TFAP2B* transcription factor
transcription factors and congenital heart defects, 102–3, 112–13
Thapsigargin
interstitial cells of Cajal as pacemakers in GI tract and, 328
TRP channels in *Drosophila* and, 662
Thrombin
TRP channels in *Drosophila* and, 656
Tidal breathing
normal
airway surface liquid volume and phasic shear stress, 546–47
Tight junctions
claudins and epithelial paracellular transport, 403–5
Time scales
stress transmission in the lung and, 512–18
Tissue elastic/frictional stresses
stress transmission in the lung and, 512–13
Toadfish swimbladder muscle
superfast muscle physiology and, 193, 195–217
Tocopherol
oxidative stress in marine environments and, 261
Tolerance
fasting
comparative physiology of food deprivation and, 224–28
Topology
FXYD proteins in ion transport and, 432–33
*tph-1* gene
TRP channels in *C. elegans* and, 723
Traction microscopy
stress transmission in the lung and, 516–17
Trafficking
NHERF adaptor proteins and, 496, 498
Transcriptional regulation
claudins and epithelial paracellular transport, 419
TRP channels in *C. elegans* and, 723–24
Transcription factors
congenital heart defects and, 97
Transdifferentiation
cardiac regeneration and, 39–42
endothelial-cardiomyocyte interactions
in cardiac development and repair, 60–61
Transduction
airway surface liquid volume and phasic shear stress, 548–52
Transgenes
cardiac regeneration and, 36–40, 42
history of research, 18
Transient receptor potential (TRP) channels
in *C. elegans*
apoptosis, 730–31
cilia localization, 727–28
complex behaviors, 723–24
*cup-5*, 730–31
$F_0/F_1$ ATPase, 727–28
male mating behavior, 725–27
mammalian analogy, 724–25
nociception, 720–22
olfaction, 720–22
open questions, 731–32
orthology, 724–25
overview, 719–20
regulation, 723–24
transcription, 723–24
TRPC channels, 728–30
TRPM channels, 728–30
TRPML channels, 730–31
TRPP channels, 725–28
TRPV channels, 720–24
in *Drosophila*
activation, 658–70
antagonistic effects, 658–63
$Ca^{2+}$, 658–63
calmodulin, 663–64
conclusions, 676
dark, 664–68
excitatory role, 668–70
heterologous systems, 655–70
INAD, 671–72
$InsP_3$, 667
light, 670–76
long-term adaptation, 674–75

mammalian TRP channels, 675–76
native properties, 655–63
organization in signaling complexes, 653–55
photoreceptor cells, 664–68
phototransduction, 651–55
$PIP_2$ depletion, 667–68
PKC, 671–72
PLC, 667–72
rhabdomeres, 671–73
signaling, 651–55
translocation, 670–76
TRPL channels, 655–75
introduction to
functional properties of mammalian TRP channels, 625
growth cone guidance, 633–36
mammalian TRP channel structure, 622–25
overview of mammalian TRP channels, 619–21
six-transmembrane channel structure, 622–25
store-operated $Ca^{2+}$ entry process, 621–22
TRPA1 channel, 632
TRPC subfamily, 625–27
TRPM subfamily, 630–32
TRPML subfamily, 633
TRPP subfamily, 632–33
TRPV subfamily, 627–29
permeation and selectivity
calculation of permeability, 688–91
characterization, 687–93
conclusions, 709–10
dwelling in deep well, 693
Eisenman's thory, 691–92
electrostatics of ion selectivity, 691–92
estimations of pore diameter, 692–93
flux, 693
future directions, 709–10
Goldman-Hodgkin-Katz theory, 688–91
hopping over barriers, 693
hydrodynamics, 692–93
introduction, 685–86
pore architecture, 699
regulation, 701–5
single-pore aspartates, 697–98
TRPC1/5 conduction, 701–5
TRPC pores, 699, 701
TRPM channels, 705, 707–9
TRP superfamily, 686–87
TRPV channels, 693–700, 704
TRPV5/6 channels, 697–98
Translocation
TRP channels in *Drosophila* and, 670–76
Transplantation
cardiac regeneration and, 29, 32–36
Transport
airway surface liquid volume and phasic shear stress, 543–57
claudins and epithelial paracellular transport, 403
FXYD proteins in ion transport and, 431–52
Sgk1 kinase and epithelial transport, 461–79
Transpulmonary pressure
stress transmission in the lung and, 507, 511–12
Trauma
biophysical lung injury and biotrauma, 585–610
Triglycerides
LXRs and FXR in cholesterol and fat metabolism, 159–80
Troponin
superfast muscle physiology and, 193, 196–97, 200–1, 206, 208–9, 211, 217
TRPA channels
introduction to TRP channels and, 619
TRPA1 channel
introduction to TRP channels and, 632
TRPC channels
introduction to TRP channels and, 619, 625–27
TRP channels in *C. elegans* and, 721, 728–30
TRPL channels
TRP channels in *Drosophila* and, 649, 655–75
TRPM channels
introduction to TRP channels and, 619, 630–32
TRP channel permeation and selectivity, 705, 707–9
TRP channels in *C. elegans* and, 728–30
TRPML channels
introduction to TRP channels and, 619, 633
TRP channels in *C. elegans* and, 730–31
TRPP channels
introduction to TRP

channels and, 619, 632–33
TRP channels in *C. elegans* and, 725–28
TRPV channels
introduction to TRP channels and, 619, 627–29
TRP channel permeation and selectivity, 693–700, 704
TRP channels in *C. elegans* and, 720–24
*Trypanosoma cruzi*
myocardial inflammatory responses and, 75
Twitch fibers
superfast muscle physiology and, 195, 198–217
Two-photon laser scanning microscopy (TPLSM)-based fluorescence imaging systems
cardiac regeneration and, 40, 42

U

U46619
TRP channels in *Drosophila* and, 656
Ubiquitin
Sgk1 kinase and epithelial transport, 461, 467, 469–70
Ultraviolet radiation (UVR)
oxidative stress in marine environments and, 253, 262
Unitary currents
interstitial cells of Cajal as pacemakers in GI tract and, 307, 321–25
Uterus
mechanical force and airways, 563–76

V

Vagal control
gastrointestinal tract and, 279–93
Vanilloid
TRP channels in *C. elegans* and, 720
Vascular endothelial growth factor-α (VEGF-α)
endothelial-cardiomyocyte interactions
in cardiac development and repair, 55
Vascular endothelium insulin receptor knockout
insulin resistance syndromes and, 131–32
Vasculature
LXRs and FXR in cholesterol and fat metabolism, 167–69
Ventilatory support
biophysical lung injury and biotrauma, 585–97, 605–6
Vertebrates
auditory transduction mechanisms and, 10
*Vibrio harveyi*
oxidative stress in marine environments and, 263
Vitamin C
oxidative stress in marine environments and, 260
Vitamin E
oxidative stress in marine environments and, 261
Voltage dependence
CNG and HCN channels, 383, 386
introduction to TRP channels and, 619

W

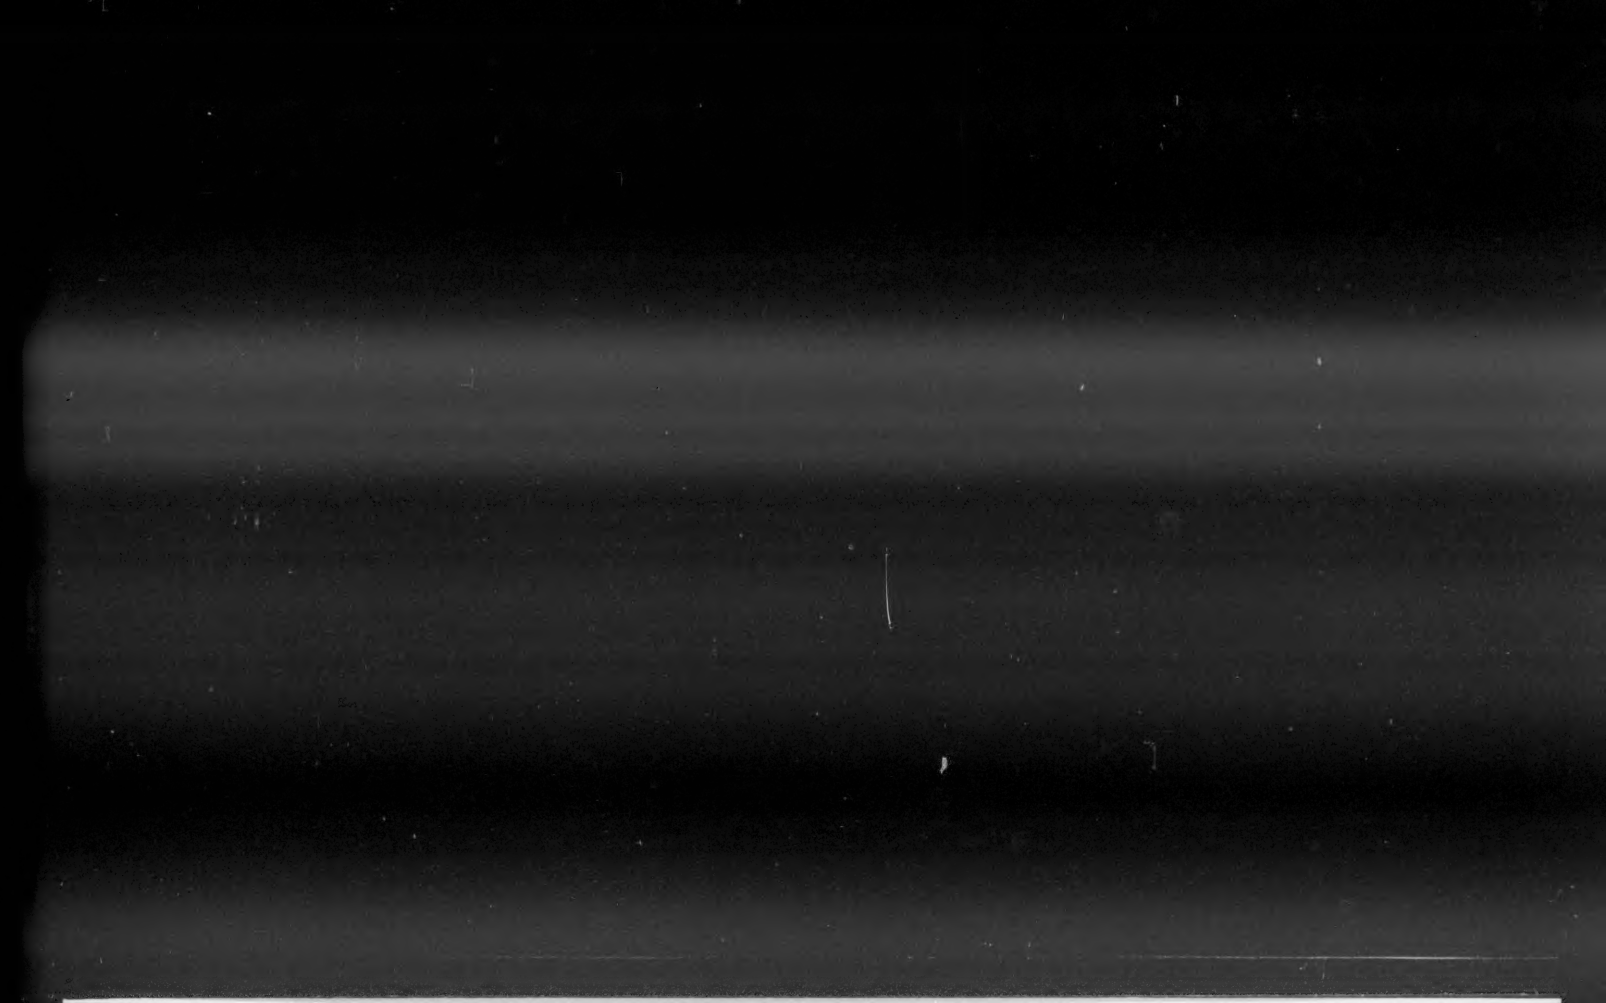
Water transport
airway surface liquid volume and phasic shear stress, 544–45
Webb WW, 1–24
Wells
TRP channel permeation and selectivity, 693

X

*Xenopus laevis*
FXYD proteins in ion transport and, 436–43, 450–52
introduction to TRP channels and, 635–36
Sgk1 kinase and epithelial transport, 465, 473–74
TRP channels in *Drosophila* and, 662–64
X-gal chromogenic dye
cardiac regeneration and, 38–39
X-ray crystallography
CNG and HCN channels, 385–91

Y

Yeasts
TRP channels in *C. elegans* and, 719

Z


*ZIC3* transcription factor
transcription factors and congenital heart defects, 101–2, 112
ZIP kinase
signaling in smooth muscle of the gut and, 345, 356–57
$Zn^{2+}$
history of research, 16, 18
